①

Installed Dell Power Manager - it did not install.

-
1. Does the fan work? - Yes, I hear fan
 2. Monitor temp? HWMonita ~ Core Temp
Downloaded & installed HWMonita

Max temp exceeded allowable 60C.

Restarted to try to get into BIOS.

That triggered a BIOS firmware update.

CMD right click

Run As Administrator

Got to BIOS using System > Recovery option

only choices on Thermal are Optimized & Quiet.
Optimized is selected.

There is a fan control override. Did not invade this yet.
